Hruska Clinic Top Recommendations are in Bold  
Cushion and guidance categories work best with PRI orthotics

**\*\*Neutrality with PRI tests after walking in shoe determines which shoe works for each patient. \*\***

**Quality of a Good Shoe**

Heel counter does not fold in

Shoe bends in the toe box easily and not in the middle of the shoe. Toe box bend should not be too stiff

No outside heel give and the heel height should be symmetrical

**Quality of a Poor Shoe**

**\*\*When walking you should be able to sense stability of the heel throughout the gait cycle as well as arch support/contact as you step through and push off your big toe.**
